

iSeries DATA REPLICATION

Secure, Fast, Reliable...

- **Real-time database replication**
All database updates are sent to the target files as they happen
- **Bi-directional replication**
Files can be replicated and then updated across multiple servers throughout the network
- **Inter-system or intra-system replication**
Replicate data between servers or between libraries on the same iSeries
- **Multi-threaded replication engines**
Increases replication efficiency while allowing differing replication groups to be stopped and started individually
- **Refresh on the fly**
Files can be refreshed to synchronize data while the replication continues
- **Multi-member support**
- **Configurable error handling**
